

Notice:

This is my first tutorial, it`s very simply and cool.

But my ENGLISH is very LAME because i don`t have english in school so.. be nice ;)

Any questions and comments please e-mail [here](#)

Let`s just start this tutorial: 1.

First, create a new document in photoshop.

At start let`s make 500\*500 resolution with transparent background.

Rename layer to "MAIN" 2.

Now press "D" to reset the colors, and select a "gradient tool" reflected.

Change "gradient tool" mode to difference, opacity 100%.. 3.

.. and draw a line in random position. 4.

And another, and another... 5.

..another, another over 20 times :) 6.

Now add some "radial gradient" to create a black rings in random position

Some 2-3 7.

Now press "ctrl+b" to enter the "color ballance" window

We are interesing the blue color so make the color levels: -100, 0, 100

image should be now light blue color 8.

Then draw a one single "radial gradient" on the random position,

Image should make now "blue-orange" colors 9.

Add a single "linear gradient" on the random edge

This should give nice effect :) 10.

Duplicate layer (layer -> duplicate layer ) and rename to "copy main"

and set to "overlay mode", make it invisible now 11.

Now go to layer "MAIN"

Apply filter "stylize -> find edges"

And make visible now layer "COPY MAIN" 12.

This is it! That`s the end of tutorial :)

If you play with the tools (smudge, erase and other)

You can make cool effects

Here is example what you can do with this effect :)

If you create some cool images please info me at [pluniopan](#)
