

This is some effect i made when i creating other tutorial.. i think someone might like this.
Lol this effect is to simple :). Huh, you can play with "image/transform/perspective". Add some clouds and filters to create nice landscape

My english is still not perfect but i think all you can understand this tutorial perfectly

Any questions and comments please e-mail [here](#)

If you use this tutorial in some art that you submit on DA or show public please give me credit. This include my other tutorials

PART 1: CREATING WATERFALL :) 1.

Create a new 600x600 document. If you want rename it to "WATERFALL"

Fill it with dark-blue colour

2.

Go to "Filter > Render > Lens Flare" and add "50-300mm Zoom" with 120% Brightness in center 3.

Now

"Filter > Stylize > Extrude"

Size = 18

Depth = 80

Type = Pyramids

4.

"filter>blur>radial blur"

Zoom, quality-good, amount-100 5.

Ctrl+f

with this you create this same filter another time 6.

"filter>disort>polar coordinates"

"polar to rectangular" mode

And that`s all.. simple 2min effect.
