

Weird Squares by Nikhil [ [nikhil.deviantart.com](http://nikhil.deviantart.com) ]

Make a new image 1024x768...or whatever size you want the image to be. Select the **Custom Shape tool**. Select the Square shape from the drop down menu. Set mode to Normal and Opacity to 50%. Add a new layer and then start drawing squares on the bg with your Custom Shape tool. **Make sure that you overlap the squares** like shown in the image.

Next Select the layer on which you have just Created the squares. Go to Edit - Transform - Skew... and apply it. Next play around till you get a shape you like..Once you get a shape you like then Apply it. Next Press Ctrl + T and in the Scale box scale your image by 50%..This is done so that the slight pixelisation at the edge is got rid of...

Fool around a bit till you get the desired effect....make sure you use the Distort and Perspective option also...I've used this effect in the image on the left...use can also make neat effects with fonts...make sure you rasterize them..hope this tutorial helped you..enjoy....
